WHAT IS CLAIMED IS:

- 1 1. A method comprising:
- in a network, collecting data about a packet passing from
- 3 a source system to a destination system;
- 4 generating a markup language graphical file based on the
- 5 collected data; and
- 6 displaying the markup language graphics file.
- 1 2. The method of claim 1 in which collecting comprises:
- tracing routes from the source system to the destination
- 3 system; and
- for each of the routes, storing a node identification, a
- 5 hop time, and a travel time from the source system to an
- 6 intermediate node.
 - 1 3. The method of claim 2 in which the node
 - 2 identification comprises a node name.
 - 1 4. The method of claim 2 in which the node
 - 2 identification comprises an Internet Protocol (IP) address.
 - 1 5. The method of claim 2 in which generating comprises:
 - 2 determining a number of nodes in each of the routes;
 - assigning coordinates to each of the systems in each of
 - 4 the routes; and

- 5 storing the coordinates and associated node
- 6 identification, hop time, and travel time from source system
- 7 to each of the systems in each of the routes in the markup
- 8 language file.
- 1 6. The method of claim 5 in which the markup language
- 2 comprises Hypertext Markup Language (HTML).
- 1 7. The method of claim 5 in which the markup language
- 2 comprises Extensible Markup Language (XML).
- 1 8. The method of claim 5 in which each of the systems
- 2 on each of the routes is positioned on an imaginary line
- 3 emanating from a center of a geometric structure.
 - 1 9. The method of claim 8 in which the geometric
- 2 structure comprises a circle.
- 1 10. The method of claim 8 in which the geometric
- 2 structure comprises a square.
- 1 11. The method of claim 1 in which displaying comprises
- showing an image represented by the markup language graphics
- 3 file on browser software.
- 1 12. The method of claim 11 in which the image includes
- 2 geometric shapes representing nodes in each route.

1

- 1 13. The method of claim 12 in which a color of the
- 2 displayed shapes represents a network.
- 1 14. The method of claim 12 in which a color of the
- 2 displayed shapes represents a potential timing problem.
- 1 15. The method of claim 12 further comprising displaying
- 2 a node identification and route timing data when an element of
- 3 the displayed file is highlighted by a user.
- 1 16. The method of claim 1 further comprising displaying
- 2 a time travel histogram of a highlighted displayed file.
 - 17. A method comprising:
- in a network, tracing routes from a source system to the
- 3 destination systems;
 - for each of the routes, storing data representing a node
- 5 identification, a hop time, and a travel time from the source
- 6 system to an intermediate node;
- 7 generating an interactive markup language graphics file
- 8 for the data; and
- g displaying the interactive markup language graphics file.
- 1 18. The method of claim 17 in which generating
- 2 comprises:
- determining a number of systems in each of the routes;

- assigning coordinates to each of the systems in each of
- 5 the routes; and
- 6 storing the coordinates and associated node
- 7 identification, hop time, and travel time from source system
- 8 to each of the systems in each of the routes in the markup
- 9 language file.
- 1 19. The method of claim 17 in which displaying comprises
- viewing an image represented by the markup language graphics
- 3 file on browser software.
 - 20. The method of claim 19 in which the image includes
- 2 geometric shapes representing systems in each route.
- 1 21. The method of claim 20 in which a color of the
- 2 geometric shapes represents a network.
- 1 22. The method of claim 20 in which a color of the
- 2 geometric shapes represents a potential timing problem.
- 1 23. The method of claim 19 further comprising displaying
- a node identification and route timing data when any of the
- 3 geometric shapes is highlighted by a cursor on an input/output
- 4 device.
- 1 24. The method of claim 19 further comprising displaying
- 2 a time travel histogram of the highlighted geometric shape.

- 1 25. The method of claim 17 in which the data is stored
- in a remote computer system.
- 1 26. The method of claim 17 in which the interactive
- 2 markup language graphics file is displayed on a remote system.
- 1 27. A computer program stored on a computer readable-
- 2 medium, the computer program comprising instructions that
- 3 cause a computer to:
- 4 collect data in a network from a source system to
- 5 destination systems;
- generate a markup language graphics file for the
- 7 collected data; and
- 8 display the markup language graphics file.
- 1 28. A computer program stored on a computer readable-
- 2 medium, the computer program comprising instructions that
- 3 cause a computer to:
- 4 periodically trace network routes from a source system to
- 5 the destination systems;
- for each of the routes, store data representing a node
- 7 identification, a hop time, and a travel time from the source
- 8 system to an intermediate node;
- g generate an interactive markup language graphics file for
- 10 the data; and
- display the interactive markup language graphics file.
